Objective

Driven to craft impactful web experiences, I'm an eager front-end developer with a passion for Javascript and ReactJS, coupled with good English skills. While proficient in .NET, my focus lies in designing user-centric interfaces that engage and delight audiences. My strong problem-solving skills, collaborative spirit, and thirst for learning make me a dedicated teammate ready to contribute to innovative projects in a fast-paced environment.

Experience

Front-end Developer Intern

September 2021 - December 2021

FPT Software

- Contributed to the development of a secure web application within a 25-person Agile team.
- Used JavaScript, jQuery, and Kendo UI to build a user-friendly frontend. Demonstrated backend proficiency by integrating two databases with the existing Java framework.
- Intensive testing during late-stage development assisted in finding bugs and ability to deliver robust solutions under pressure.

Projects

OJT Management System

May 2023 - October 2023

- Self-learning project to implement microservice architecture using Spring Boot, and Spring Boot Multiple Module approach, showcasing proficiency in building scalable and modular applications.
- Successfully apply DDD principles to design and structure the project. Develop building blocks and building logic to centralize project Spring components.
- Leveraged Kafka as a distributed messaging system to enable efficient and reliable communication between microservices, ensuring asynchronous processing and decoupling of services.
- Tend to apply Grafana and Prometheus to enable real-time monitoring of application metrics and performance.
- GitHub: [FE](#) - [BE](#)

Grocery Store Management System

May 2021 - September 2021

- Collaborated with a three-person team to design and implement secure and scalable solutions.
- Re-implementation of Go Ethereum in Golang, and utilized my skills in programming and blockchain development.
- Developed a Command Line Interface application using the Cobra library to provide a user-friendly interface for interacting with network.
- GitHub: [FE](#) - [BE](#) - [Mobile](#)

Ecommerce Store

- Spearheaded the development and launch of a fully functional e-commerce platform from scratch, utilizing [technology stack, e.g., Python, Django, ReactJS].
- Designed and implemented a user-friendly and intuitive interface for customers to browse products, add items to cart, and checkout seamlessly.
- Developed robust backend infrastructure to manage product inventory, orders, and customer data.
- Implemented marketing automation tools to drive traffic and conversions.
- GitHub: [Source code](#)

Education

Bachelor of Software Engineering, FPT University, Ho Chi Minh City

2019 - 2023

Skills

Languages	Javascript, Typescript, C#
Frameworks	ReactJS, NextJS, ASP .NET Core
Tools	Git, Postman
DBMS	SQL Server, MySQL, MongoDB
Soft Skills	Research, Self-learning, Problem-solving, Teamwork

Activities and Hobbies

- Actively involved in the Coffee Talk English community.
- Hobbies: play football and badminton, read novels, travel.
